| Team ID       | SWTID-2026-5847                                 |
| Project Name  | Import Data Using Transform Maps (Spreadsheets) |
| Maximum Marks | Marks 3                                         |

#### :Define Problem Statements (Customer Problem Statement)

HR and administrative users receive employee information in spreadsheet format and need to import it into ServiceNow accurately. The project uses an Import Set Table and Transform Map to stage, map, transform, and validate employee data before it is inserted or updated in the Employee Test table. Coalesce is used with Employee .ID to update existing records and prevent duplicate employee records during repeated imports

| Problem Statement (PS) | I am (Customer)                                                      | I'm trying to                                                                     | But                                                                                   | Because                                                                                 | Which makes me feel                                                                                                     |
|------------------------|----------------------------------------------------------------------|-----------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------|
| PS-1                   | An HR or administrative user managing employee records in ServiceNow | Import employee data from spreadsheets into ServiceNow accurately and efficiently | The spreadsheet can contain new employees and existing employees with changed details | The data needs to be staged, mapped, transformed, validated, matched and using Coalesce | Confident that employee records are imported correctly, existing records are updated, and duplicate records are avoided |
