

Solution Requirements

Date	01 October 2026
Team ID	SWTID-2026-5847
Project Name	Import Data Using Transform Maps (Spreadsheets)
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create the requirements for importing employee spreadsheet data into ServiceNow using an Import Set Table, Transform Map, validation, Coalesce, Employee Test table, reports, and dashboard.

- Functional Requirements (FR) define the functions the solution must perform.
- Non-Functional Requirements (NFR) define how reliably, securely, and efficiently the solution should operate.

Fill out the requirements and acceptance criteria for the project.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Users must access ServiceNow with authorized accounts before importing employee data.	High
2	Authorization levels	HR/administrative users can perform employee data imports; ServiceNow administrators/developers configure tables and transform rules.	High
3	External interfaces	The solution must accept employee data from Excel spreadsheets through the ServiceNow import process.	High
4	Transactions processing	The system must load spreadsheet data into the Import Set Table, run the Transform Map, transform and validate fields, and insert or update Employee Test records.	High

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
5	Reporting	The solution must provide reports and a dashboard to review employee import results and record status.	High
6	Business rules, etc.	Employee ID is used with Coalesce so existing employee records are updated and duplicate records are avoided.	High
7	Compliance to laws or regulations	Employee information must be handled only by authorized ServiceNow users and protected according to applicable organizational data-handling rules.	Medium
8	Other	The solution should support repeated spreadsheet imports and clearly identify transformation or validation issues.	High

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance&Speed	Spreadsheet data should be processed through the Import Set and Transform Map without unnecessary delay.	Import completes within an acceptable operational time for the uploaded dataset.
2	Scalability	The process should support repeated employee spreadsheet imports and increasing employee records.	Existing and new employee records can be processed without changing the overall workflow.
3	Security&Data Privacy	Employee data should be accessible only to authorized ServiceNow users and stored in the designated tables.	Only authorized users can access or modify employee import data.
4	Reliability&Availability	The import workflow should consistently stage, transform, validate, and load employee data.	Successful imports produce the expected Employee Test records; errors are identifiable.

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
5	Usability&Accessibility	The spreadsheet import, transformation, reporting, and dashboard workflow should be clear for HR/administrative users.	Users can complete the import process and review results without ambiguity.
6	Other	The configuration should be maintainable, including field mappings, validation rules, Coalesce settings, reports, and dashboard components.	Changes to mappings or reporting can be maintained without redesigning the complete workflow.
