Project Title	Import Data Using Transform Maps (Spreadsheets)
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal report aims to improve employee data import into ServiceNow by using spreadsheets, an Import Set Table, and a Transform Map for structured staging, mapping, transformation, and validation. Coalesce is used to update existing employee records and prevent duplicates, with reports and a dashboard for monitoring.

Project Overview	
Objective	To import employee spreadsheet data into ServiceNow accurately and efficiently using an Import Set Table and Transform Map, with validation and Coalesce-based matching for existing records.
Scope	The project covers spreadsheet preparation, Import Set Table creation, Transform Map configuration, data transformation and validation, Coalesce to avoid duplicates, and reporting through reports and a dashboard.
Problem Statement	
Description	Manual spreadsheet imports can contain incomplete, incorrectly mapped, or repeated employee data, making it difficult to update existing records and avoid duplicates.
Impact	The solution provides a structured import workflow that improves data accuracy, updates existing employee records using Employee ID, reduces duplicate records, and makes import results easier to monitor.
Proposed Solution	
Approach	Upload employee spreadsheet data to the Import Set Table, use the Transform Map to map and transform fields, validate the data, and use Coalesce with Employee ID to update existing records and prevent duplicates.
Key Features	- Spreadsheet-based employee data import. - Import Set Table for staging uploaded data. - Transform Map for field mapping and transformation. - Data validation before loading employee records. - Coalesce using Employee ID to update existing records and avoid duplicates. - Reports and dashboard for monitoring import results.

	- Real-time decision-making for quicker loan approvals. - Continuous learning to adapt to evolving financial landscapes.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	T4 GPU
Memory	RAM specifications	8 GB
Storage	Disk space for data, models, and logs	1 TB SSD
Software		
Frameworks	Python frameworks	Flask
Libraries	Additional libraries	scikit-learn, pandas, numpy, matplotlib, seaborn
Development Environment	IDE	Jupyter Notebook, pycharm
Data		
Data	Source, size, format	Kaggle dataset, 614, csv UCI dataset, 690, csv
